System Test Review – GROUP GRADING

To complete this assignment, review the system requirements and test in section 2 of your Beaversource for your project. The requirements are locked and can only be changed by an approval from the instructor. The tests can be modified as you see fit.

- Please review each test in this section and revise as needed to meet the rubric below.
- Once all of the tests have been reviewed and updated, print out section 2.
- Sign the appropriate places below and scan everything (section 2 and this page) to a single pdf and submit to TEACH by 4pm on Monday of week 14

Grading Criteria:

It is suggested that you re-read section 3 and 7 of your text book before reviewing your tests. For each test:

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Score (2-0 points)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does the test accurately measure the engineering requirement?</td>
<td></td>
</tr>
<tr>
<td>Is the test of sufficient detail for an engineering freshman familiar with electronic test tools to perform the test?</td>
<td></td>
</tr>
<tr>
<td>Is the test simple and not overly complex?</td>
<td></td>
</tr>
<tr>
<td>Does the test conform to the required structure (step-by-step with a single final pass/fail condition)?</td>
<td></td>
</tr>
</tbody>
</table>

Signatures:

I have read through section 2 and paid special attention to the following:

- The point value for each requirement
- The specific values of each engineering requirement
- The test pass/fail condition for each requirement

I understand that I am responsible for achieving the project not only to the letter of these requirements, but also in the spirit of the project. If changes need to be made to a requirement, I understand that my group needs to contact the course instructor and customer as soon as possible to discuss. I understand that no changes will be allowed within one week of a graded assignment.
