Functions and Lists

Local variables/Scope

More practice loops/functions...

- Write a function with a nested loop that displays x rows of '#' with y '#'s on each row.
- Write a function that asks the user for the speed of a vehicle and how many hours it has been travelling. Write another function to print out how far the vehicle has gone each hour. Ask the user if they want to perform another calculation.

Demo...

Demo...

What if we want to store gross_pay information?

- What is a list vs. array?
- How do we make a list in python?
