

CS 160

CS Orientation

Expressions, Data Types, &
Input/Output

Assignment 3: Semantics vs. Syntax

- What are these words?
- Why is this important?

Syntax

Penguin

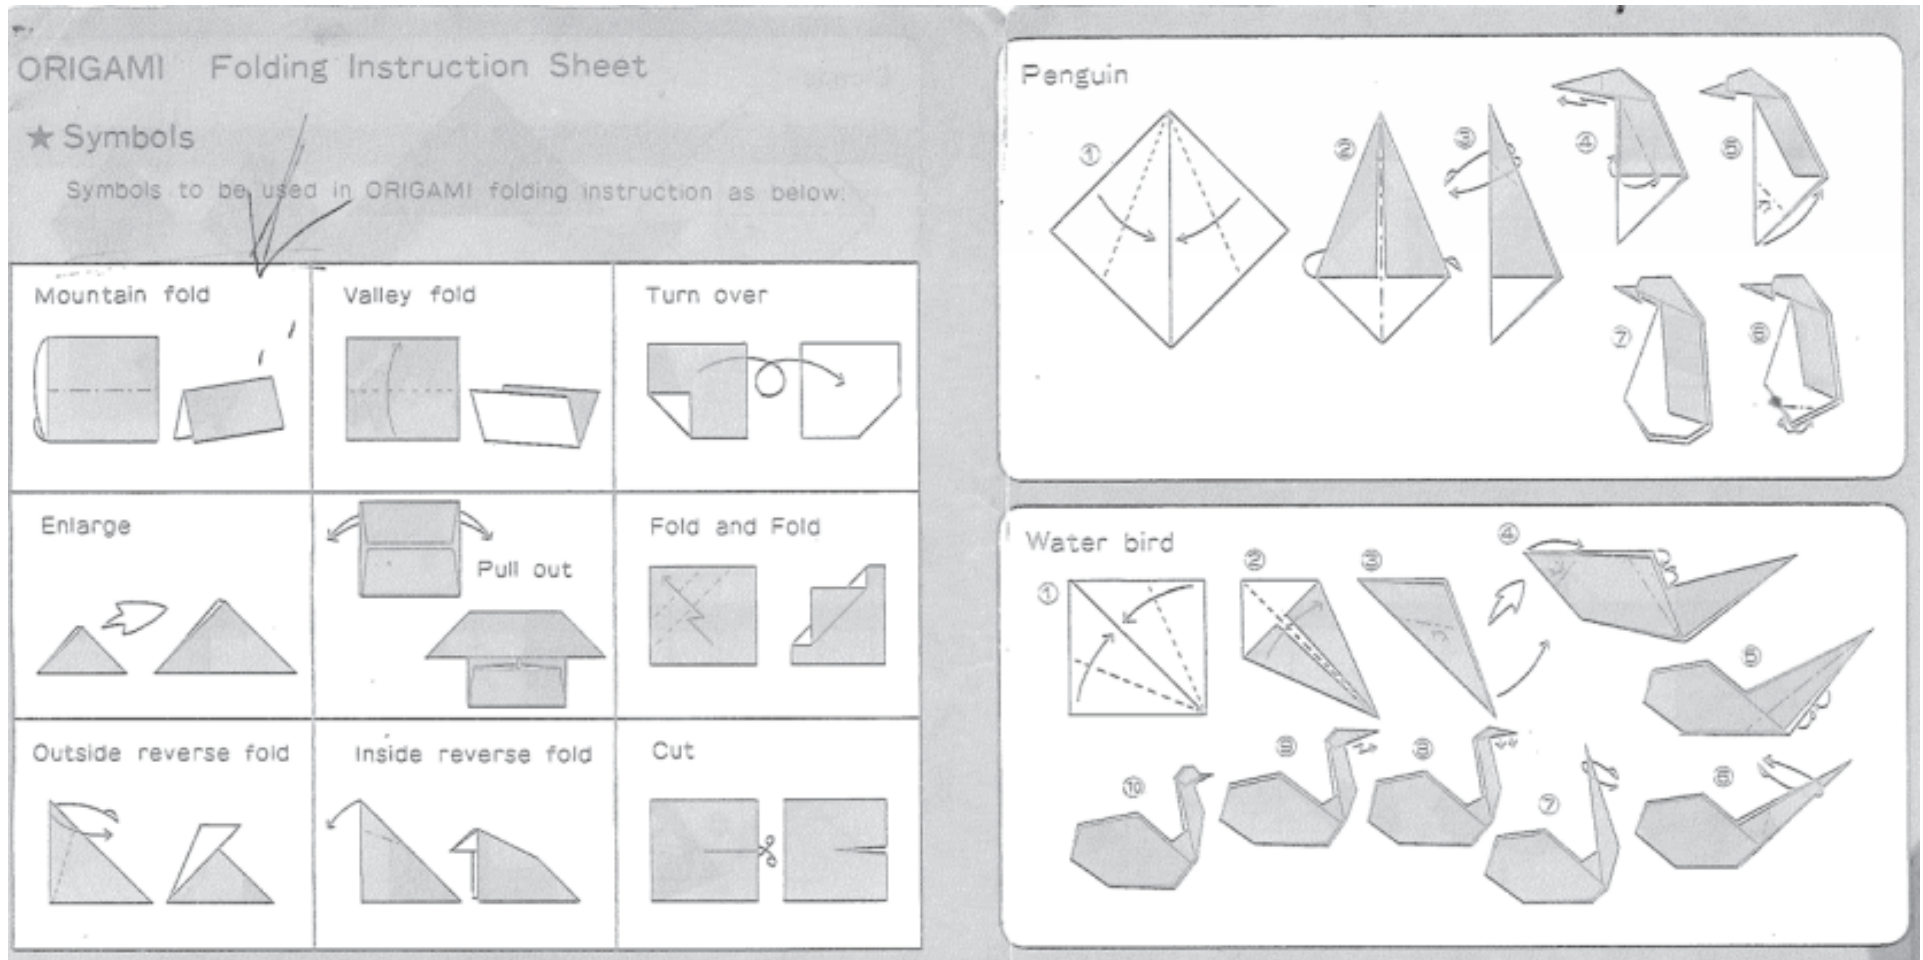

Water bird

Syntax and Semantics...

Which is more important?

What does this have to do with CS?

- How is this like CS programs?

Data Types/Converting

- string - “string of text”
- character – ‘a’
- integer – 79
- boolean – True
- float – 79.0

Demo...

Python Operators and Their Computer Symbols

- +
- -
- *
- /
- //
- %
- **

Hierarchy of Operations

- Functions, i.e. `math.sqrt()`

- Power

- Mod

- Mult, Div

- Add, Sub

- Relational

- Logical

Python Examples

- $5 * 2 + 3 - 10$
- $5 * (2 + 3) - 10$
- $5/2$
- $5//2$

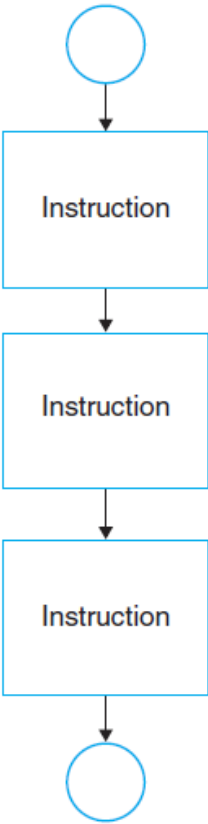

How about storing values?

- `ch = 'a'`
- `num = 79`
- `cont = True`
- `num = num + 1`
- Can we mix types?
 - `num = num + cont`
 - `num = num + ch`
 - `ch = ch + num`

Expressions and Equations

Expressions	Equations
$A + B$ <i>A</i> and <i>B</i> are numeric. The resultant is numeric and is not stored.	$C = A + B$ <i>C</i> , <i>A</i> , and <i>B</i> are numeric. The resultant is stored in <i>C</i> .
$A < B$ <i>A</i> and <i>B</i> are numeric, character, or string. The resultant is logical and is not stored.	$C = A < B$ <i>A</i> and <i>B</i> are numeric, character, or string. The resultant is stored in <i>C</i> ; <i>C</i> is logical.
$A \text{ OR } B$ <i>A</i> and <i>B</i> are logical. The resultant is logical and is not stored.	$C = A \text{ OR } B$ <i>C</i> , <i>A</i> , and <i>B</i> are logical. The resultant is stored in <i>C</i> .

Sequential Logic Structure

Algorithm	Flowchart	Pseudocode
<p>⋮</p> <p>5. Instruction</p> <p>6. Instruction</p> <p>7. Instruction</p> <p>8. ⋮</p>	 <pre>graph TD; Start(()) --> I1[Instruction]; I1 --> I2[Instruction]; I2 --> I3[Instruction]; I3 --> End(())</pre>	<p>⋮</p> <p>Instruction</p> <p>Instruction</p> <p>Instruction</p> <p>⋮</p>

Python Sequential Logic

```
print(" * ")  
print(" *** ")  
print(" ***** ")  
print("*****")
```

Demo...

Decision Logic Structure

Algorithm	Flowchart	Pseudocode
<pre> : 5. If <decision> then Instruction else Instruction 6. :</pre>	<pre> graph TD Start(()) --> Decision{Decision Instruction} Decision -- F --> Instruction1[Instruction] Decision -- T --> Instruction2[Instruction] Instruction1 --> End(()) Instruction2 --> End</pre>	<pre> : If <decision> then Instruction else Instruction Endif :</pre>

Relational Operators and Symbols

- $>$
- $>=$
- $<$
- $<=$
- $==$
- $!=$
