

**Project Installment #5: Low-fidelity prototype**  
**Tentative grading criteria**

**Total points: 10**

1. **4 points:** Which attributes / concepts you chose and why. You should choose at least two concepts from two distinct attributes.
  - a 3 points will be deducted if you choose only one concept / attribute.
  - b 2 points will be deducted if you don't reason why you chose the concepts you did.
2. **6 Points:** Sketch of the low-fidelity prototype:
  - a Prototype should work for both populations.
  - b You don't have to make your prototype pretty. Pencil sketches will do.
  - c Make sure the prototype / report is clear enough to help me understand how a user (mainstream / underrepresented) will use the app as you have prototyped it. Clarify any non-trivial assumptions you make about your user / situation (e.g., Location services are turned on).
3. **Note:** Up to 3 points will be deducted if your work has “*Broken Data Flow*” problem. This problem means that your concepts from Installment #4 do not inform your prototype.
