Go over Quiz #3.

Concept Map

As a class, continue working on the library class.
- Create a library object and write a function called, library_setup(), that initializes all member data to user input. Discuss multiple alternatives for this function.

```cpp
//create library object
//call library_setup function
```
• Name the “Big Three”.

• When is each of the Big Three called in the example above?

If you have time!
• Define each of the “Big Three”.
