CS199 (Spring 2018): Thinking Critically About Data
Final Project Peer Review

June 5, 2018

Process:
1. Each team receives a project report draft.
2. Each team member reads and reviews the draft individually based on the criteria below.
3. The team meets to discuss their reviews.
4. The team reaches consensus on the feedback and writes a summary for the authors.

Review Criteria:
Reviews should rate each of the following four criteria on a 1 (lowest) to 5 (highest) scale AND provide at least a few sentences describing strengths, weaknesses, and/or points of confusion as feedback for the authors.

- Appropriateness of case study. Is the piece controversial? Misleading? Relevant to class?
- Quality of argument about what is problematic about the case study.
  - Correct application of ideas from class.
  - May involve finding the original data or simulating data.
- Quality of suggestions for alternative presentations.
  - Would the suggestions resolve the issue? Present any new issues of their own?
- Clarity of paper.

Turn in: (via email to the authors and professor)
- Draft on which the reviews are based.
- Individual reviews.
- Review summary/consensus.
