1. What did you struggle with the most on Exam 1? Your TA will spend a few minutes going over the most misunderstood concepts.

2. What is your understanding of Pass by Value and Pass by Reference:

3. What is wrong with the code below?
   
   ```cpp
   void add_one(int a){
     a++;
   }
   
   int main() {
     int a = 5;
     add_one(a);
     cout << 5 << " plus 1 = " << a << endl;
     return 0;
   }
   ```

4. What is a default argument and where does it need to be?

5. Can you ever have multiple functions with the same name in C++? Explain.
