Emergency Exit Routes

Emergency Exits

Room Monitor Locations

Field Verification Note:

Preferential accuracy was given to the interior room areas and shapes, not the thickness of walls or structural features. This may have an effect on OSU planning, RMs, CAs, outside contractors, or others who might use the drawing as a guide for projecting required materials, open penetration areas, or other regular information notes from CADD drawings. This is a Cathy issue that is clearly important to fix at this point of the drawings and especially as it is adopted.
Field Verification NOTE:

Preference in accuracy was given to the interior room areas and shapes, not the thickness of walls or structural features. This may have an effect on OSU planners, PMs, CMs, outside contractors, or others who might use the drawing as a guide for projecting required material, open penetration areas, or other regular information taken from CAD drawings. This is a Legacy issue that is nearly impossible to fix at this point of the building's life especially as it is occupied.
